EDUCATION

University of Oxford, Exeter College Expected Jun 2029
MPhys in Physics | Enrolled Oct 2025 | Oxford, UK

- First-year result: Distinction (2025/26).

Guanghua Cambridge International School Sep 2022 - Jun 2025
A Levels: 4 A*s, including Mathematics, Further Mathematics and Physics; Computer Science A. IPQ: A*.

RESEARCH EXPERIENCE

PSXM Magnet Design - Summer Research Student Jul - Sep 2026
Shanghai Jiao Tong University | J-PARC muon g-2/EDM study

- Formulated a six-coil magnet model in Python/NumPy and used least-squares current solves to investigate dipole and quadrupole field patterns.
- Checked numerical results against an analytic ideal-shell reference; assessed shield-radius trade-offs and documented the limits of the 2D approximation.
- Co-authored a 19-page report with Zejia Lu under Professor Liang Li and presented the study to SJTU-KEK collaborators.

Muon g-2 Toy Monte Carlo - Research Project Apr 2026
Python, NumPy, SciPy, Matplotlib and uproot

- Fitted 10.99 million selected positron counts with a five-parameter decay model using SciPy, estimating normalisation, asymmetry, frequency, phase and lifetime.
- Compared the known input frequency with the saved toy fit: a difference of 0.64 reported standard errors in this single fit.
- Examined toy and ROOT-data residuals with FFT analysis and documented model assumptions and mismatch in a 12-page report.

Liquid-Damped Compound Pendulum - IPQ Research 2023 - 2024
International Project Qualification | Grade A*

- Derived and compared linear and quadratic drag models; designed a 3D-printed experimental container and analysed video-timed oscillations using Python.
- Evaluated model agreement across rotational radii and discussed experimental uncertainty in a 21-page research report.

TECHNICAL PROJECT

Gesture-Controlled VR Prototype - OneTouch / SecondTouch Jul - Nov 2025
2025 hackathon prototype and software iteration | Python, MediaPipe and Unity

- Converted 21 MediaPipe hand landmarks into wrist/bone updates over UDP and implemented Unity hand reconstruction and pinch-based object interaction.

LEADERSHIP

Oxford China Forum - President Jul 2026 - Present
14th Oxford China Forum | Oxford, UK

- Chair Oxford China Forum; coordinated its September 2026 AI salon with Zhejiang University.

SKILLS

Scientific computing: Python, NumPy, SciPy, pandas, Matplotlib and uproot for ROOT-file data access.
Methods and tools: Monte Carlo, least squares, model fitting, uncertainty analysis, residual/FFT analysis, Git and LaTeX.
Languages: English and Mandarin Chinese.
